

In the claims

40. (Previously presented) A portable device comprising:
unauthorized separation detection means arranged to detect the unauthorized separation of the portable device from a person; and
control means arranged to effect at least partial disablement of the portable device in response to the unauthorized separation of the portable device and person, wherein the unauthorized separation detection means are means for detecting the release of a releasable connector connecting the portable device to the person.
41. (Previously Presented) A portable device as claimed in claim 40, wherein the releasable connector comprises a strap.
42. (Previously Presented) A portable device as claimed in claim 40, wherein the releasable connector is released by severance.
43. (Previously Presented) A portable device as claimed in claim 40, wherein the unauthorized separation detection means detects the interruption of a closed conductive path via the releasable connector.
44. (Previously Presented) A portable device as claimed in claim 40, wherein the portable device comprises a cellular radio transceiver.
45. (Currently Amended) A portable device as claimed in claim 44, wherein the control means is arranged to effect at least partial disablement of the portable device by controlling the cellular radio transceiver to transmit a disable message instructing the at least partial disablement of the portable device.
46. (Current Amended) A portable device as claimed in claim 40, wherein the portable device is or comprises a cellular mobile telephone for operation in a cellular communications network and the control means is arranged to effect at least partial disablement of the portable device by sending a disabling message to the network instructing the network to disable ~~for disabling~~ normal

operation of the telephone in the network.

47. (Previously Presented) A cellular telephone network comprising a portable device as claimed in claim 46 wherein the mobile telephone comprises a handset and a replaceable card, which enables the handset to operate as a telephone in the network, and the network is responsive to the disabling message sent by the mobile telephone to disable the card from normal use in the network and/or to disable the handset from normal use in the network.
48. (Currently Amended) A portable device ~~having a radio transmitter~~, comprising:
a releasable connector arranged to connect the portable device to a person and arranged to release the connection of the portable device to the person if the device is grabbed while connected to the person; and
control means arranged to effect at least partial disablement of the portable device in response to the release of the releasable connector.
49. (Previously Presented) A portable device as claimed in claim 48, wherein the releasable connector comprises a strap.
50. (Previously Presented) A portable device as claimed in claim 48, wherein the releasable connector is released by severance.
51. (Currently Amended) A portable device as claimed in claim 48 64, wherein the unauthorized separation detection means detects the interruption of a closed conductive path via the releasable connector.
52. (Currently Amended) A portable device as claimed in claim 48, further comprising a radio transmitter wherein the control means is arranged to control the radio transmitter to send a message in response to the release of the releasable connector.
53. (Currently Amended) A portable device as claimed in claim 48, wherein the device is or comprises a cellular mobile telephone having a radio transmitter for operation in a cellular communications network and the control means is arranged to control the radio transmitter to send a disabling message to the network instruction the network to disable ~~for disabling~~ normal operation of the telephone in the network.

54. (Currently Amended) A portable device comprising:
unauthorized separation detection means arranged to detect the unauthorized separation of the portable device from a counterpart device worn by a person; and
control means arranged to effect ~~at least~~ partial disablement of the portable device in response to the unauthorized separation of the portable device and counterpart, wherein the portable device and the counterpart device are arranged to form a radio frequency wireless couple, the diminution of which is detectable by the unauthorized separation detection means.
55. (Previously Presented) A portable device as claimed in claim 54, wherein the portable device comprises a cellular radio transceiver.
56. (Currently Amended) A portable device as claimed in claim 55, wherein the control means is arranged to effect ~~at least~~ partial disablement of the portable device by controlling the cellular radio transceiver to transmit a disable message instructing the partial disablement of the portable device.
57. (Currently Amended) A portable device as claimed in claim 54, wherein the portable device is a mobile telephone comprising a handset and a replaceable card and the control means is arranged to effect ~~at least~~ partial disablement of the mobile telephone by locking the handset to the replaceable card.
58. (Currently Amended) A portable device as claimed in claim 54 wherein the portable device is or comprises a cellular mobile telephone for operation in a cellular communications network and the control means is arranged to effect ~~at least~~ partial disablement of the portable device by sending a disabling message to the network instructing the network to disable ~~for disabling~~ normal operation of the telephone in the network.
59. (Currently Amended) A portable device wearable by a person comprising:
unauthorized separation detection means arranged to detect the unauthorized separation of the portable device from a counterpart device; and
control means arranged to effect ~~at least~~ partial disablement of the counterpart device in response to the unauthorized separation of the portable device and counterpart, wherein the portable device and the counterpart device are arranged to form a radio frequency wireless couple, the diminution of which is detectable by the unauthorized separation detection means.

60. (Previously Presented) A portable device as claimed in claim 59, wherein the counterpart device comprises a cellular radio transceiver or mobile telephone.
61. (Currently Amended) A portable device as claimed in claim 60, wherein the counterpart device comprises control means is arranged to effect ~~at least~~ partial disablement of the ~~portable counterpart device~~ by controlling the cellular radio transceiver to transmit a disable message instructing the at least partial disablement of the counterpart device.
62. (Currently Amended) A portable device as claimed in claim 59, wherein the ~~portable~~ counterpart device is a mobile telephone comprising a handset, ~~and~~ a replaceable card and ~~the~~ control means wherein the control means is arranged to effect ~~at least~~ partial disablement of the mobile telephone by locking the handset to the replaceable card.
63. (Currently Amended) A portable device ~~having a radio transmitter~~, comprising:
unauthorized removal means arranged to detect the unauthorized removal of the device from a person porting the device; and
control means arranged to effect ~~at least~~ partial disablement of the device in response to the unauthorized removal of the device from the person porting the device.
64. (New) A portable device as claimed in claim 48, further comprising unauthorised separation detection means for detecting the release of the releasable connector from the portable device.
65. (New) A portable device as claimed in claim 54, wherein the portable device is a mobile telephone that is capable of making emergency calls when it is partially disabled.
66. (New) A portable device as claimed in claim 59, wherein the counterpart device is a mobile telephone that is capable of making emergency calls when it is partially disabled.
